

Final Presentation

- You are required to give a presentation on the topic of "A Medical Home" during this rotation. Typically, it will be scheduled during the last week of the rotation.
- Work with the other resident(s) on rotation with you.
- All presentations should be in power point format. Please save to **a CD** only. (You will not be able to save it to the TEAM Shared folder as you have *Read Only* access).
- If you do not know how to do a power point presentation please feel free let us know and we would be happy to help you.
- The setting will be very informal and typically your presentation will be somewhat interactive.

Topic

1. We have deliberately assigned a very general topic to you for this presentation. All we ask is that your presentation shows what you have learned and how you think it may change the way that you practice.
2. Examples of previous presentations may be found on the shared drive in the PI-3 Folder.
3. Presentations may focus on the following:
 - How will you set up your practice so that you can provide a medical home to CYSHCN? Whom would you hire? What systems might you set up? How might you design the physical space? What would be the benefits to you and the family? What would be the barriers?
 - You are a specialist and the other resident is the general pediatrician (or vice-versa). How will you co-manage the care of the CYSHCN? What would enhance your relationship and the care of the child and what barriers will you have to overcome?
 - Create a fictitious CYSHCN. How will you assure a medical home for this child?
 - Create a fictitious child whose parents need you to advocate for the child's educational needs. What have you learned in the TEAM rotation that will help you advocate? What will you communicate to the family? What kind of systems might you facilitate to assure the child can go to school safely and receive an appropriate education?
 - You are a social worker assigned to a family with an infant in the NICU. The infant has been diagnosed with _____. The family does not know that this is a special health care need. How will you explain this to the family? How will you explain to the parents what a medical home is, what they should expect as parents, what they should look for in a pediatrician, etc?
 - You are a family with an 18-year-old CYSHCN. Describe what the ideal medical home is doing for your family and has done for your family. What kind of resources do you anticipate having for your child when he is 21?
 - You are a pediatrician caring for a child in a state other than Wisconsin. What resources are available for CYSHCN in your practice? What resources will be helpful to you as the provider? (For those who will be practicing outside of WI the research you do for this presentation will be useful to you in your future practice.)
 - Your choice. There is no right or wrong way to do this.

Be creative!
